Arhaansh Jhingan

+91 992 095 6210 | arhaanshjhingan@gmail.com | LinkedIn | GitHub | Bangalore, India

Education

Vellore Institute of Technology — Vellore, India
BTech in Computer Science and Engineering — *July 2025 – July 2029*

Indian Institute of Technology Madras — Chennai, India
BS in Data Science and Applications — *July 2025 – July 2029*

Skills

Languages: C++, Python — **ML/Data:** PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, OpenCV — **Other:** FastAPI, MongoDB, MySQL, Git, Docker

Research

Short-Term Electrical Load Forecasting — *Submitted to **AUPEC 2026*** — *March 2026 – August 2026*
- Proposed a **novel pre-processing approach** for load signals on **Haryana grid data**, under Dr. Ganesan K.
- **Benchmarked 17 forecasting models** (statistical, tree-based, deep, attention-based), demonstrating the superiority of **feature-engineered tree-based models**.

Fuzzy Logic Based Clustering for Discharge Data — *July 2026*
- Formulated and implemented **clustering algorithms** from scratch combining **machine learning** with **fuzzy logic** to handle uncertainty and overlapping cluster boundaries in discharge data.

Experience

Mintzy — Remote
Quantitative Machine Learning Developer — *September 2026 – Present*
- Implementing **market signals and trading strategies** into the core **machine learning pipeline**, driving **OS-level optimizations** across memory, scheduling, and hot paths to minimize **latency**.
- Transitioning into **quantitative research** in the same role, focused on **signal generation** and systematic strategy design.

Power Projects Ltd. — Remote
AI Research Intern — *May 2026 – September 2026*
- Built an end-to-end **deterministic extraction pipeline** translating diagrams into simulation-ready electrical network models.
- Developed a **deterministic LLM programming** framework and **rule-based Agentic AI system** pairing LLM reasoning with constrained translation logic to **automate multi-step SLD workflows**.

Larsen & Toubro — Hybrid
Machine Learning Engineer Intern — *June 2026 – August 2026*
- Engineered a multi-stage **computer vision pipeline** for **symbol detection** in single line diagrams via hierarchical decomposition.
- Designed **graph-based reasoning** modules to extract connectivity and topology from diagrams, enabling structured interpretation of unstructured visual documents.

CodeChef-VIT — Vellore, India
AI/ML Team Member — *February 2026 – Present*
- Conducted large-scale **EDA** on datasets finalized for **4000+ participants** at the DevSOC'26 hackathon.

Projects

Vivaad Radar — *GitHub* — *August 2026*
- Built an **ML-based land litigation risk system** mapping court cases and loan encumbrances to land parcels with **risk probabilities**.

Multimodal Driver Fatigue Detection System — *GitHub* — *April 2026*
- Real-time **multimodal** fatigue estimation fusing facial streams and driving telemetry into a **LightGBM** pipeline.

Awards & Achievements

Innohack 2026 Winner (Aug 2026)**:** Won VIT Vellore's largest hackathon for **Vivaad Radar** (above).

Equinox 2026 Winner (Apr 2026)**:** Won the 60-hour Equinox Hackathon at VIT Vellore (Anchor, Panasonic).

CodeChef Hackathon — 2nd Place (Mar 2026)**: DistilBERT** authorship classification model for text attribution.

IIT Madras Innovator Spotlight: Plug-and-play, containerized **ML inference service** (**FastAPI, Docker**) for any business retention workflow.
